PHASE I BOOK EXPLOITATION

SOV/2146

Leningrad. Universitet

**MATERIALY PO MASHINNOI PEREDOCH:** sbornik 1 (Materials on Machine Translation); Collection of Articles No. 1; Leningrad, Izd-vo Leningr. univ., 1958. 228 p. 1,000 copies printed.

No contributors mentioned.

**PURPOSE:** The book is for students, scientists, and engineers interested in machine translation.

**CONTENTS:** This collection of 15 articles is published as volume I of the Materials on Machine Translation. It represents the work of 25 Soviet scientists at the Leningrad University Experimental Laboratory for Machine Translation which was created in March 1953 to continue research on translating with the aid of electronic machines. Although the present volume deals with both the theoretical and the practical aspects of machine translating, the emphasis is on the compilation of algorithms for a number of languages, many of them Asiatic. There are no references.

## TABLE OF CONTENTS:

Introduction, I. N. S. Pitalov, and G. M. Tsvetin. Dictionary Structure and Information Coding in Machine Translation	61

SOV/177-58-4-8/32

AUTHOR: Katerinich, N.T., Lieutenant-Colonel of the Medical Corps, Candidate of Medical Sciences.

TITLE: On Ways to Reduce Lethality and Prophylaxis of Acute Intussusception (O putyakh snizheniya letal'nosti i profilaktike ostroy kishechnoy neprokhodimosti)

PERIODICAL: Voyenno-meditsinskiy zhurnal, 1958, Nr 4, pp 25-29 (USSR)

ABSTRACT: The author indicates that intussusception has a high death rate in spite of considerable success in its surgical treatment. Based on his experiences during World War II and on experiments by M.I. Kolomiychenko and V.I. Struchkov, the author concluded that the reduction from 34.3% to 5.3% of post-operative mortality in acute intussusception in soldiers during the past 15 years, results from improved diagnosis, application of complex medical measures and local anaesthesia. The best prophylaxis consists in studying the fundamental causes of

TITLE: The Problem of Treating Wounds

PERIODICAL: Voyenno-meditsinskiy zhurnal, 1958, Nr 9, pp 18-20 (USSR)

ABSTRACT: An analysis of observations of injured persons over the course of three years is presented. The author sums up the results in 4 conclusions: 1) In most cases, a complete and timely surgical treatment of wounds and the application of antibiotics (N.N. Yelanskiy's method) including periodic irrigation by catheterization of the treated wound permits primary saturation. In this case, in 96.2% of the cases, a healing by first intention was observed. 2) Antibiotics do not make up for defects and inopportune surgical treatment. The overestimation of the therapeutic importance of antibiotics is sometimes the reason for complications. 3) In the overall treat-

Card 1/2

ment of a wounded person, the early, comprehensive and immediate surgical treatment of the wound is decisive. 4) A primary suture is applicable under field conditions, in case the patient stays in the field hospital for at least 10 days. There is 1 table.

The change in the organic matter of southern chernozem under the influence of oak plantings. S. A. Samtsevich and T. D. Katerinich (Inst. of Forestry Acad. Sci. Ukr. S.S.R., Kiev). Pochvovedenie 1953, No. 4, 15-22.—In dry years the org. matter content of soils in forest shelter belts in the steppe region increases and in wet seasons decreases. The productivity of soils in the shelter belts is assoccd. with the increased content of sol. org. matter. These sol. substances are the result of exosmosis of the roots which in the case of oaks takes place all year around, especially in the winter.

J. S. J.

KATSEVICH T D

The cause of the lack or of the insufficiency of timber in  
the area of oak groves in A. S. Kiselev's district  
is the same as in the districts of the Donets Basin.  
The main reason is the lack of timber in the  
districts of the Donets Basin. The main reason is the  
lack of timber in the districts of the Donets Basin.

There is no timber in the districts of the Donets Basin.

Title : Studies on Trichomoniasis of Cattle in Bulgaria

Orig Pub : Selskostop. mis"l, 1958, 3, No 1, 49-56

Abstract : As a result of investigation of 4195 cows at trichomoniasis infested farms and of 102 artificially infected cows, the correlation of trichomoniasis on the one hand and sterility and abortions on the other was demonstrated. Twenty to 65 percent of cows affected with trichomoniasis were sterile, 0.3-40 percent (3.8 percent on the average) of cows aborted. Most abortions occurred on farms where the disease had appeared a short time previously. In all of the aborted cows and in 11-100 percent (64 percent on the average) of the sterile cows inflammatory processes were found in the sex apparatus; trichomonades, however,

Card 1/2

BULGARIA/Diseases of Farm Animals - Diseases Caused by Protozoa

R

Abs Jour : Ref Zhur Biol., No 5, 1959, 21431

were comparatively seldom seen. In artificially infected cows with a normal sex cycle, the parasites disappear spontaneously after varied periods of time and the animals acquire immunity. Experimental infections were unsuccessful in cows which were in a state of nymphomania at the time of inoculation. In a state of anaphrodisia cows may be artificially infected, after which the disease becomes latent and the parasites may only be found by examining cultures obtained from the vaginal mucus. --

KATETOV, M.

Mathematical Reviews  
Vol. 15 No. 2  
Feb. 1954  
Topology

Katětov, M. On the dimension of metric spaces. Doklady Akad. Nauk SSSR (N.S.) 79, 189-191 (1951). (Russian)

Let  $P$  be a topological space; let  $\dim P$  be the dimension of  $P$  defined by finite coverings; and let  $\text{Ind } P$  be the "large" inductive dimension, defined by the boundaries of neighborhoods of closed sets. It is known that  $\dim P \leq \text{Ind } P$  if  $P$  is normal [N. Vedenisow, Izvestiya Akad. Nauk SSSR, Ser. Mat. 5, 211-216 (1941); these Rev. 3, 58]. If  $P$  is a metric space with a countable basis, then, as is well-known,  $\dim P = \text{Ind } P$ . It is announced here, and a proof is sketched, that  $\dim P = \text{Ind } P$  for all metric spaces. Several other equivalent statements are proved. An interesting corollary is the fact that if  $P$  is a metric space, then  $\dim P \leq 0$  if and only if  $P$  is homeomorphic to a subspace of a countable Cartesian product of discrete spaces. E. Hewitt.

KATETOV, Miroslav (Praga)

Dimension of non-separable spaces [with summary in English] Part 1.  
Chekh.mat.zhur. 2 no.4:333-368 Ja '53. (MLRA 7:5)  
(Spaces, Generalized)

Katětov, Miroslav. On the dimension of non-separable spaces. II. Czechoslovak Math. J. 6(81) (1956), 485–516. (Russian. English summary)

This continuation of an earlier paper [same J. 2(77) (1952), 333–368; MR 15, 815] is divided into three sections. Section 1 contains several theorems asserting that almost all maps from a given space to a separable Banach space have nice properties of various types. Let  $R$  be a separable Banach space and let  $P$  be a normal space;  $C'(P, R)$  denotes the set of all totally bounded functions from  $P$  to  $R$ . Then, if  $S$  is closed in  $P$  and  $\dim S \leq \dim R$ , for almost all  $f \in C'(P, R)$  in the sense of category,  $\dim f(S) = \dim f(S) = \dim S$ . Also, if  $S$  is a closed  $G_\delta$  in  $P$  and  $f \in C'(P, R)$ , for almost all  $F \in C'(P, R)$  which agree with  $f$  on  $S$  we have  $\dim F(P-S) \leq \dim (P-S)$ . Other results of the same general type are proved. Section 2 contains various results concerning the existence of arbitrarily fine coverings of a metric space  $P$  whose intersection properties with each element of a given sequence  $\{A_i\}$  of closed subsets of  $P$  are nice. This section has considerable contact with the work of Morita [Math. Ann. 128 (1954), 350–362; MR 16, 501]. The last section concerns the existence of extensions of maps with the extended image differing from the original image by a set of small dimension. For example, it is proved that if  $P, S, R$  are as above, and if  $K$  is a convex subset of  $R$ , every  $f: S \rightarrow K$  has an extension  $F: P \rightarrow K$  with  $\dim F(P-S) \leq \min[\dim S + 1, \dim f(S) + 1, \dim P]$ .

Title : News in the Study of the Structure of Alloys by the Method of Autoradiography

Orig Pub : Studii si cercetari metalurgie, Acad. RPR, 1958, 3, No 3, 371-384

Abstract : An attempt is made to show the possibility of disclosing the microdistribution of elements in metallic alloys by means of autoradiography, and the advantages of this new method of investigation are demonstrated by calculations and practical considerations. It is emphasized that it is possible to determine the composition and consequently the real properties of individual micro-objects of the metal, and consequently that it is possible to go over from average statistical results to a recognition of the local properties of the matter.

*b*  
Steels with nitrogen. S. Percu, A. Kathrein, and R. Fischgold. Acad. rep. popolare Române, Studii tehnice și măc. 3, 385-96 (1958). — N is an alloying element which can raise the anticorrosive properties of 18/8 and 12/12 steels. N stabilizes the austenitic structure at room temp., lowers the crit. rate of heating for the martensite transformation, prevents the intercryst. corrosion in Cr-Ni and Cr-Mn steels, and produces or improves the grain formation of steels high in Cr. Since it is difficult to alloy steels on a plant scale with N, a procedure is recommended: Prep. an alloy high in N, alloy to a steel free from N, and handle the new alloy first at temps. (to be found by trial and error) at which it shows a high degree of plastic deformation. 16 references.

Effect of aluminum upon the microstructure of cast iron  
with respect to the nodular graphite. Traian Dumitrescu  
and Werner Jacobson. Andris Lipke  
and Werner Jacobson.

The effect of Al on the structure of cast iron depends on the composition of the iron and the Al content. For the iron with 3.5% C and 0.5% Si the carbide-forming action of Al has a very strong influence. The addition of Al will increase the amount of primary carbides and will decrease the amount of secondary carbides.

This means that Al has a very strong influence on the structure with flake or nodular graphite. At 0.4% Al, resp., gives, in addition to the e-phase also the  $\gamma$ -phase. In iron with up to 5.6% Al, the  $\gamma$ -phase forms with the  $\alpha$ -phase a fine, crystalline aggregate. The amount of primary carbides will decrease with increasing Al content. The higher the  $\gamma$ -phase will be, the more primary carbides will appear. At high conc. Al the primary carbides will be very large. This is due to the fact that the primary carbides are formed by the reaction between the liquid phase and the solid solution of the iron. The amount of primary carbides will decrease with increasing Al, and for low concs. modular graphite at higher Al contents the alloy is harder than the iron contg. flaky graphite, which has the same amt. of Al and the same structure. TITLE: Spectroscopic Study of Cellulose Ethers. I. On the  
Applicability of Spectroscopic Methods for Characterizing  
the Photochemical Reactions of Ethyl Cellulose

PERIODICAL: Vysokomolekulyarnyye soyedineniya, 1960, Vol. 2, No. 12,  
pp. 1805-1810

TEXT: The ultraviolet, infrared and luminescence spectra of ethyl cellulose preparations with varying carboxyl content were investigated. Ultraviolet irradiation of ethyl cellulose was found to change the luminescence spectra and intensities. These changes are particularly marked at the beginning of irradiation, thus permitting the first stages of degradation of the ethyl cellulose chains to be determined. It is shown that the sensitivity to light increases with the carboxyl content of ethyl cellulose. Neutralization of the carboxyl groups by Pb- and Na ions increases the light stability of the compounds. It is assumed that the presence

Card 1/3

I. On the Applicability of Spectroscopic B017/B055  
Methods for Characterizing the Photochemical Reactions of Ethyl Cellulose

of carboxyl groups in ethyl cellulose compounds accelerates the photochemical reactions initiated by ultraviolet light. This is in agreement with a previously expressed assumption that the carboxyl groups play an essential role in the thermooxidative degradation of ethyl cellulose. The ultraviolet absorption spectra of ethyl cellulose preparations in the 210 - 400  $\mu\text{m}$  region are given in Fig. 1. Fig. 2 shows the infrared absorption spectra of ethyl cellulose preparations, run on the ИКС-14 (IKS-14) spectrometer. The luminescence spectra of these preparations are given in Fig. 3. The intensity of the luminescence of ethyl cellulose preparations after ultraviolet irradiation at 420 and 470  $\mu\text{m}$  is represented in Fig. 4. The luminescence spectra of preparations treated with  $\text{Pb}(\text{NO}_3)_2$  and NaOH are shown in Figs. 5 and 6. Luminescence was excited by a Hg quartz lamp type СВДШ-250 (SVDSH-250), spectra being taken by means of a УМ-2 (UM-2) monochromator and ФЭУ-17 (FEU-17) photomultiplier, and recorded by an ЭПП-09 (EPP-09) potentiometer. There are 6 figures and 17 references: 10 Soviet, 5 US, 1 German, and 1 French.
